Lesson 2 Exercises

Program Structure and Variables

Use these exercises after you can compile and run the starter robot profile program.

Exercise 1 Identify the Parts

Code	What Is It?
string robotName = "PracticeBot";	
int motorCount = 4;	
double batteryVoltage = 12.6;	
// Robot profile variables.	
cout << "Robot name: " << robotName << endl;	

Exercise 2 Add a Driver Name

- Create a string variable named driverName.
- Give it your name or a sample name.
- Print it on its own output line.

Exercise 3 Fix the Bugs

Buggy Code	Corrected Code
string robot name = "Bot";	
int teamNumber = "12345";	
double batteryVoltage = 12.6	
cout << "Motor count: " motorCount << endl;	

Exercise 4 Skill Check

Create a program that prints a robot profile with at least five labeled lines.

- Use at least one string variable.
- Use at least one int variable.

- Use at least one double variable.
- Use at least one comment.
- Use meaningful variable names.
- Compile and run successfully.
